

Biedermann Motech GmbH & Co. KG Environmental Policy

Biedermann Motech wants an environment that is intact. That is why protecting the environment is one of our top corporate goals, which includes adhering to our environmental policy. The standard for our environmental protection is set by EU environmental legislation and regulations as well as by directives and guidelines. The continuous avoidance or minimisation of environmental impacts is an important environmental goal. Our company doesn't just set environmental goals, it permanently monitors and evaluates the effects we are having on the environment. If new or modified activities, products or services results from a new project, the necessary environmental measures will be checked and defined.

Environmental protection must be continuously improved. Every member of staff has to bear their part of the responsibility for protecting the environment. Prevention is the best way to protect the environment. Existing equipment is optimized, evaluated based on data gathered and if necessary, corrective processes and measures are implemented. In this respect, the possible deployment of environmental protection is also dependent on the understanding that our suppliers have for the environment.
